ARISTO®

aluminium
profile system

ARISTO – is one of the leading suppliers and manufacturers of aluminum profiles, fittings and accessories for sliding door wardrobes, interior partitions, dressing rooms and shelf systems. For more than 20 years of history, the company has established itself as a strong brand, a manufacturer of high-quality products and a reliable supplier. Good reputation, high-tech production, efficient logistics, global franchising and wide distribution network allows Aristo to take a leading position in many countries.

Advantages of working with Aristo

- Quality guarantee
- Own manufacturing and in-house quality control department
- Latest technology
- Transparent pricing policy
- Continuous training
- Technical support
- Short production time
- Unlimited custom production possibilities and individual customer approach
- Reduced minimum orders
- Complex supply of the necessary fittings in the required quantity
- Logistics and customs services for the shipment and clearance of products

ARISTO mission

We strive for the development of high-quality storage solutions to provide order and comfort in every home.

ARISTO[®]

aluminium
profile system

Product range. Wardrobe and shelving systems, aluminium profiles, components and accessories for wardrobes – all are made from high-quality raw materials, which pass through the incoming control for compliance with state standards. Each aluminium profile of our production undergoes surface treatment procedures – it is anodized or covered with PVC film. Due to careful production control, we achieve exceptional strength and reliability of the product. Another strong confirmation of high-quality of our products is their long service life. For example, prospective period of service life of the component is 10 years.

ARISTO®

aluminium
profile system

Standard system is a recommended basic line of the profiles. It is the embodiment of reliability and a base for any imaginable experiment. It features a wide colour range, unique geometry, big sizes of doors and quality warranty.

STANDARD SYSTEM

ARISTO®

aluminium
profile system

STANDARD SYSTEM

ARISTO®

aluminium
profile system

WAVE system combines subtle thin lines and elegant frames. The variety of panel materials and simple assembly make it a relevant addition to your product range. The door frames look even more elegant due to identical designs of the vertical and horizontal profiles. An invisible wide horizontal profile provides the necessary structural rigidity and the ability to install the system with a hidden top track on brackets. The doors are assembled and installed with the fittings of the Standard system according to a similar scheme.

ARISTO®

aluminium
profile system

NOVA system combines minimalism, sophisticated simplicity and functionality. The doors of this system will easily fit into any interior. Unique brackets are designed specifically to hide the top rail. Also, the system is equipped with modern rollers which provide silent and smooth door running. With NOVA system you can use furniture plates 16 mm thick and make doors up to 1500 mm wide, up to 2750 mm high and weighing up to 80 kg. The variety of filling options allows you to make each design individual and match your taste.

ARÍSTO®

aluminium
profile system

Facade frame system . A system of profiles and pivot fittings for glass or mirror doors, in which only the facade frame and transparent filling are seen externally. Exceptional conciseness of the final product is achieved due to invisible opening hinges, profile handles and a hidden furniture body.

FACADE FRAME SYSTEM

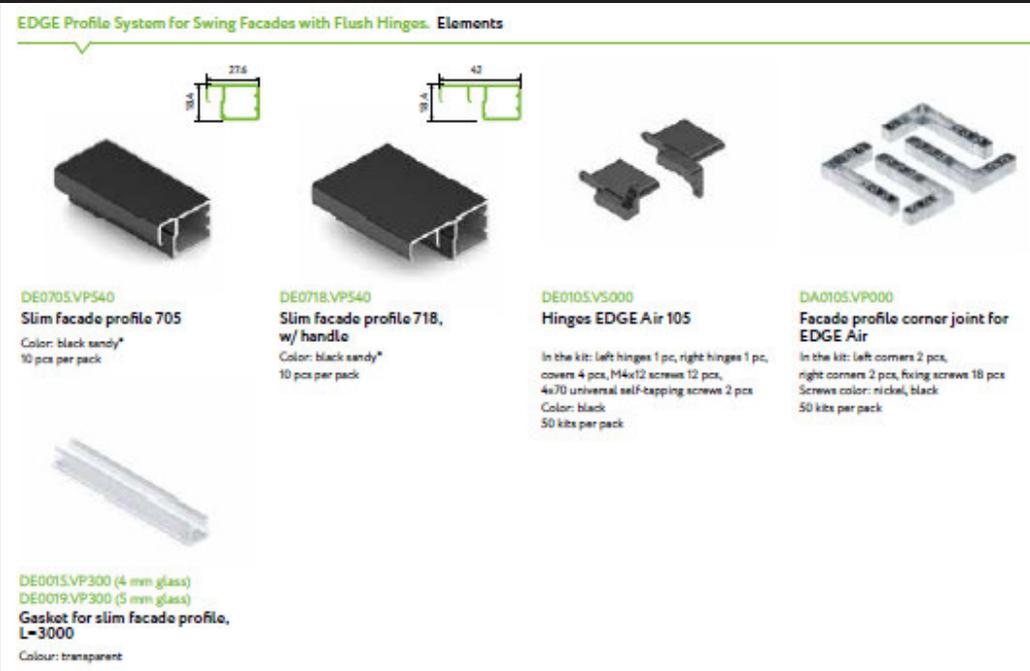

ARISTO®

aluminium
profile system

EDGE profile system for swing facades with flush hinges. A system of profiles and swing accessories for glass doors. It is perfect for furniture reflecting the modern aesthetics: stylish minimalistic facades and nothing excessive – just glass and black metal. The items look so outstandingly simple thanks to the butt opening hinges, the profile-handle and the hidden profile.

EDGE profile system for swing
facades with flush hinges

EDGE Profile System for Swing Facades with Flush Hinges. Elements

The image displays four main components of the EDGE profile system. Each component is shown with a 3D perspective view and a corresponding technical cross-section drawing. The first component is a slim facade profile (705), the second is a slim facade profile with a handle (718), the third is a hinge (EDGE Air 105), and the fourth is a facade profile corner joint (EDGE Air). A fifth component, a gasket for slim facade profiles, is also shown.

EDGE MAX profile system for swing facades with flush hinges up to 30 kg. Longing to meet modern design requirements, we have developed an innovative profile system for swing facades. The basic element is high-quality Italian flush hinges. They help to create a stylish and multi-functional interior environment. The new hinges that allow to increase the door weight up to 30 kg, handle profiles and flush case give a furniture piece a very neat look. The special profile construction ensures stability even to highest facades and the soft closing system installed in the hinges provides an unmatched comfort level.

ARISTO®

aluminium
profile system

EDGE system. Aluminium LED-shelf. A set of profiles for making various-size shelves with backlight. The assembly does not require any special tools or expensive equipment. For panels you can use glass or any other material up to 10 mm thick. Strong metal frames and hidden fasteners favor a flawless assembly. A special groove for LED strips makes light connection easy and gives the look of a floating shelf.

ARÍSTO®

aluminium
profile system

Facade frames. Facades for kitchen easily match most interiors and add style, elegance and modern looks. Unlike solid wood facades, MDF, chipboard, etc., aluminum furniture facades are more durable, last longer and are more flexible when it comes to interior design. Furniture facades are assembled system by system; each system of aluminum profiles consists of three groups of elements: the aluminum frame, various insert parts (glass, chipboard, plastic and other materials of all possible colours and finishes which can be combined) and the moving parts (i.e. hinges or rollers).

ARÍSTO®

aluminium
profile system

GOLA system. The cutting-edge design implies no visible front fittings. The GOLA system is used to open doors without handles. This is a special aluminium profile built into the frame, and the facade adjoins it. Due to the curved shape of the profile, there is formed the required space between the profile and the door to grip the door. The GOLA profile in facades looks as a stylish and futuristic metal line!

GOLA SYSTEM

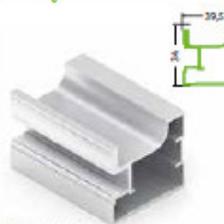

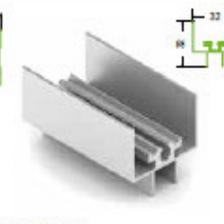

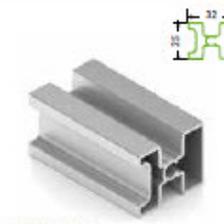

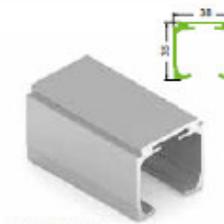

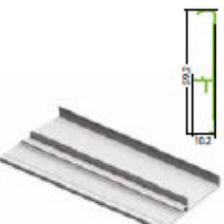

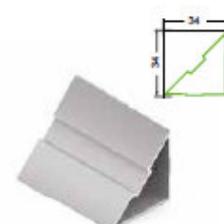

ARISTO®

aluminium
profile system

4 in 1 system is a truly unique modular system which suits even the most complex design requirements from a customer. The 4 in 1 system allows you to create projects with folding doors, pivot and sliding doors wardrobes as well as top-hung solutions and fixed partitions. The basic element of the system is the patented profile Fusion.

4 in 1 SYSTEM

4 in 1 System. Profile Range

 <p>FA0413.VP540 Stile Fusion 8/6 pcs per pack</p>	 <p>FA0715.VP500 Universal Top and Bottom Rail 8 pcs per pack</p>	 <p>FA0716.VP500 Dividing Rail 8 pcs per pack</p>	 <p>FA0410.VP500 Top Track 8 pcs per pack</p>

ARISTO®

aluminium
profile system

4 in 1 top hung system gives an advantage of not having a bottom track – this is a very common requirement for sliding doors. Without the bottom tracks, sliding doors become more applicable as a solution for example to divide different rooms. The doors can either be mounted to the ceiling or to the wall – with a recommended maximum weight of up to 60 kg. The system can also be supplemented with both sequential and synchronous mechanisms: pulling one door will open another one automatically (either to the same or to the opposite direction).

4 in 1 SYSTEM TOP HUNG SYSTEM

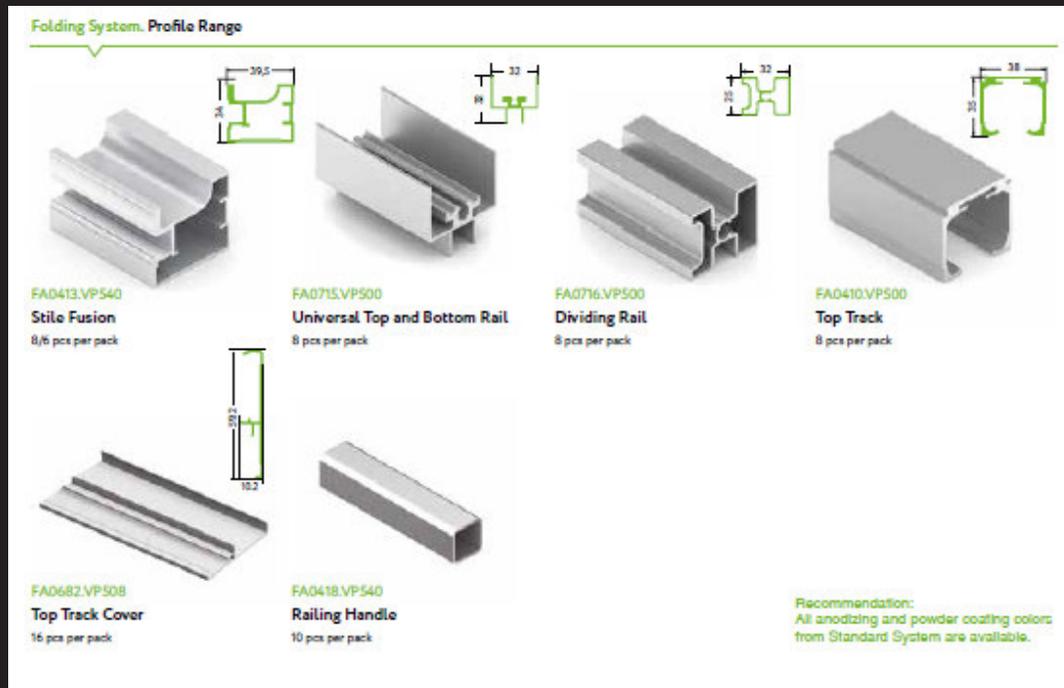

ARISTO®

aluminium
profile system

4 in 1 folding system. Folding doors allow you to save space significantly. Their compact design is perfect for small rooms, narrow corridors and niches in the wall where the installation of sliding doors is not applicable. The doors run smoothly along their tracks and positioners allow you to choose where the doors are supposed to stop.

4 in 1 SYSTEM FOLDING SYSTEM

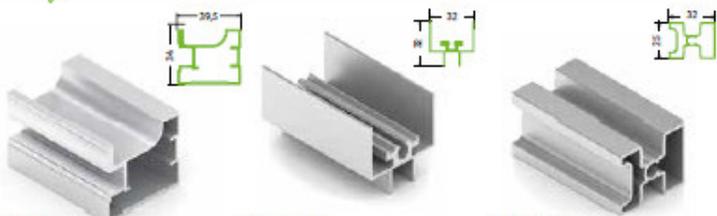

ARISTO®

aluminium
profile system

4 in 1 pivot system. For built-in wardrobes with an opening of less than 1 m width it is reasonable to offer pivot doors. The opening angle of 150° provides comfortable accessibility and good visibility inside the wardrobe. We suggest either vertical profiles or additionally installed railing handles for convenient opening and closing. Free space in doors' opening area is an obligatory requirement for this solution.

4 in 1 SYSTEM
PIVOT SYSTEM

Recommendation:
All anodizing and powder coating colors from Standard System are available.

ARÍSTO®

aluminium
profile system

Storage system. Convenient, functional and flexible solution to store clothes in various rooms. The system can be adjusted according to the project and easily customized for different dimensions. A wide range of interchangeable elements allows for different use of our system: walk-in closets, garages, loggias, niches and in combination with built-in sliding door cabinets.

STORAGE SYSTEM

ARISTO®

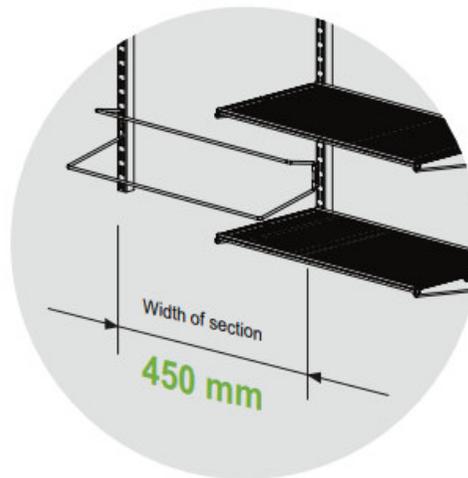

aluminium
profile system

Storage system 450. The new functional details of the Storage system with a width of 450 mm contribute to more diverse space planning based on ARISTO Storage system. It is especially useful for small rooms or rooms with non-standard walls. ARISTO Storage system 450 brings order to your home and makes it convenient to store clothes, shoes and accessories. The hung parts leave quite a lot of space while keeping a lot of stuff and visually expanding the room.

STORAGE SYSTEM
450 mm

Advantages:

- a two-section wardrobe needs just 0.5 sq.m;
- fits little space;
- perfect for narrow niches;
- a winning choice for small flats;
- high quality coating resistant to mechanical exposures;
- easy-to-move and transport;
- easy self-assemble;
- stylish and modern design;
- classic and decor collections;
- compatible with all the on-sale items of ARISTO Wardrobe System.

ARÍSTO®

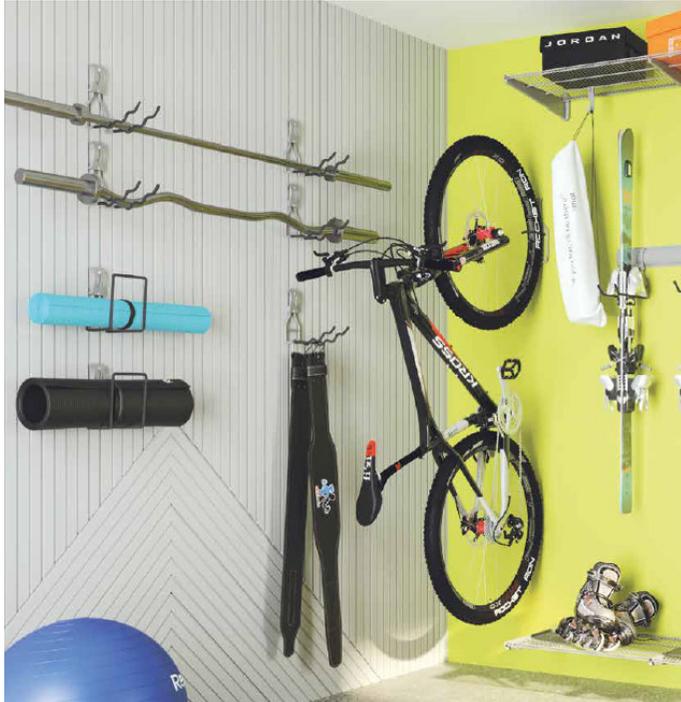

aluminium
profile system

UTILITY ROOM STORAGE SYSTEM

Utility room storage system. The system for utility room allows correct planning of the space and highlighting different zones: rarely used items, garden and hardware tools, sports equipment. Hooks of the utility room storage system can withstand loads up to 23 kg. Wire shelves will not bend from the weight even of a heavy tool: each bracket can withstand up to 20 kg. If you plan to store more than 40 kg on the shelf, you can install additional brackets. Steel is resistant to temperature fluctuations and does not deform over time.
